**HOLOCOM[®] ANNOUNCES SEVEN NEW PRODUCTS
AND IMPROVEMENTS**

(Fort Lauderdale, Fla – August 19, 2008) Holocom[®] Networks, the leading provider of high-security protective distribution systems (PDS) for SIPRNet and other classified networks, today announced seven new products and improvements to several existing products. Holocom made the announcement at the Armed Forces Communications and Electronics Association's LandWarNet conference.

Holocom's new products and product enhancements are designed to make installation easier and faster, all while maintaining the full security of the PDS. New products include the user drop box (UDB) with built-in faceplate holder and cable manager, retrofit faceplate for the original end-user drop box, cable management brackets, optional shorter raceway in 5-foot lengths, two column connectors, two 45-degree connectors, and neutral colored spacers. Product improvements include manufactured mounting points on raceway and all connectors, and design changes resulting in fewer components in connectors and other raceway products.

According to John Burns, president of Holocom, "The new products and product improvements are a direct result of feedback from our international network of installers and end users. Holocom fosters open communication with its customers and that yields innovation and improvements such as these. The system was originally designed from an installer's perspective, and that tradition continues with these changes."
